

CounterCode Enterprise Edition 1.49
<http://www.countercode.com>

Upgrade Guide

Version 1.48 to 1.49b

Note: The CounterCode script is a commercial script, and may not be used without a valid site license.

Document updated 11 April 2007

Introduction

This guide is for current users with **CounterCode Enterprise Edition version 1.48** currently installed.

Users running earlier versions should first complete the upgrade procedures described in the included Upgrade Guides **in order** (eg 1.4 to 1.45, then 1.45 to 1.46, 1.46 to 1.48 etc) before completing the upgrade procedure below.

New users should consult the Installation Guide included with the CounterCode package.

Please note that any custom modifications made to previous installations of CounterCode may cause the upgrade process to malfunction.

What's New in Version 1.49

New Features:

- New Testing interface for ip2country plugin
- Added Windows Vista and Safari browser detection
- Added (undocumented) debug mode for switchuser.php

New Features in Version 1.49b

- Fixed bug in language files, so user's email address is displayed on signup
- Allow double quotes to be used in the welcome email template
- Added maintenance mode to disable access to the stats, signup and members pages with a customisable message. Added associated options to the Edit Configuration screen
- Added .maintenance class to css for controlling the appearance of the customisable maintenance message
- Fixed mysql connection bug with the ip2country tester

Changed Files

- admin.php
- config.default.php
- config.tpl.php
- core.class.php
- counter.class.php
- login.php
- signup.php
- signupform.php
- stats.php
- switchuser.php
- style.css
- styles/new.css
- style.css
- styles/new.css
- plugins/ip2country/import.php
- plugins/ip2country/ip2country.inc.php
- plugins/ip2country/test.php
- lang/<language>/admin/editconfig.inc.php
- lang/<language>/admin/editconfig.inc.php
- lang/<language>/newuser.inc.php

Upgrading

- 1) **Important:** Back up all the CounterCode script files from your server.
- 2) Download the latest version 1.49 package from the members' area of CounterCode.com
- 3) From the zip file downloaded in step 2, upload the following files to your webhost, overwriting the existing files:
 - admin.php
 - config.default.php
 - config.tpl.php
 - core.class.php
 - counter.class.php
 - login.php
 - signup.php
 - signupform.php
 - stats.php
 - switchuser.php
 - style.css
 - styles/new.css
 - style.css
 - styles/new.css
 - plugins/ip2country/import.php
 - plugins/ip2country/ip2country.inc.php
 - plugins/ip2country/test.php
 - lang/<language>/admin/editconfig.inc.php
 - lang/<language>/admin/editconfig.inc.php
 - lang/<language>/newuser.inc.php

Do not overwrite your existing config.inc.php!

- 4) The upgrade is complete.

THANK YOU FOR CHOOSING COUNTERCODE ENTERPRISE EDITION
